	collapse		

Get Images

GET /movie/{movie_id}/images

Get the images that belong to a movie.

Querying images with a `language` parameter will filter the results. If you want to include a fallback language (especially useful for backdrops) you can use the `include_image_language` parameter. This should be a comma seperated value like so: `include_image_language=en,null`.

Responses `application/json`
